

Hitachi Data Archiver Compliance Option Software

In today's atmosphere of heightened legal and regulatory requirements, data must be both securely archived and easily accessible. Hitachi Data Archiver Compliance Option software helps companies meet these demands for archived Microsoft® Exchange email messages and attachments.

Automatically Retain, Manage and Retrieve Data

Various current regulations demand that data be retained and quickly accessible for years. If required, specific data must be turned over in minutes, not days.

Delivering unmatched data management and accessibility, Hitachi Data Archiver Compliance Option software provides rich search and discovery advantages coupled with secure access to provide a fail-safe way to retrieve data.

As part of the Hitachi Data Protection Suite of software, powered by CommVault®, Data Archiver Compliance Option software lowers risk and administrative costs. It uses state-of-the-art indexing and data movement capabilities to ensure that fixed data is protected against data alteration or loss.

With Data Archiver Compliance Option software, administrators can enforce policy-based actions across the entire archive so that data can be automatically retained, managed and retrieved. Robust media management automates the storage process and allows for fast data retrieval. To add an extra level of protection, Data Archiver software provides disaster recovery

redundancy with single or mixed media formats, minimizing costs.

Meet Regulatory Compliance and Legal Discovery Requirements

Data Archiver Compliance Option software delivers the data archival, search and retrieval capabilities necessary to meet the increasing demand on organizations for consistent data retention and retrieval. This demand requires companies to meet government data retention regulations, such as rule SEC 17a-4 or HIPAA, as well as to establish policies that comply with laws like Sarbanes-Oxley or the New Basel Capital Accord (Basel II). With Data Archiver Compliance Option software, meeting these legal discovery or regulatory compliance requirements is simplified.

Through a reliable email archiving process that regularly indexes and moves data to long term archival storage media, Data Archiver Compliance Option software lets administrators easily preserve, search and retrieve specific email data upon request. Implementing a reliable archiving

process helps reduce the risk of data loss or alteration due to corruption while minimizing the cost of managing and retrieving long term data.

Easy Management and Administration

With a single, unified browser interface, Data Archiver Compliance Option software automates the Exchange data archival process. Authorized users can easily perform multifaceted full text searches across the archive for email messages and attachments. When an external request for data or audit materials comes in, the IT staff or an authorized business user can quickly deliver the copies. And, as compliance and risk management initiatives evolve, Data Archiver Compliance Option software can swiftly adjust to match new corporate guidelines. Through automated media management and verification, Data Archiver Compliance Option software lowers administrative costs and maximizes staff productivity.

Robust, Policy-based Lifecycle Management

With Data Archiver Compliance Option software, administrators can impose policy controls to enforce data retention rules that may span many years. Storage Policies enable easy management of multiple archive copies across tiered storage architectures to support data lifecycle management and disaster recovery strategies. By implementing Data Archiver Compliance Option software processes

to manage data, administrators can be assured that policies will be adhered to with minimal administrative efforts.

Meet Regulatory Requirements. Achieve Unmatched Data Management and Accessibility. We're at Your Service.

The Hitachi Data Systems Global Solution Services team can help you address your regulatory compliance needs through services that support Data Archiver

Compliance Option software and other Business Continuity Solutions from Hitachi Data Systems. These services assist you with configuration and basic control of Hitachi storage system-based data mirroring. They also help you support your data replication requirements, including backup and recovery, testing and development, business continuity and disaster recovery.
